

## **SUSTAINABILITY**

The Laconia School District recognizes the need for environmental sustainability. The Laconia School District recognizes the unique position of schools to lead by joining staff and students in building community awareness, goal setting and coordinated social action. This policy will seek to identify and reduce the negative ecological/environmental impacts of all construction, operational and educational activities.

The Laconia School District will establish and maintain a “Green Committee” to plan, coordinate and provide consultation in balancing fiscal and environmental responsibility in decision-making and everyday practices. Committee members will be appointed by the Superintendent or his/her designee to represent each segment of the school community.

The committee shall be responsible for updating the action plan for approval by the Superintendent and coordinate activity to meet goals set in that plan. The committee will be an available resource for all staff charged with decision making or purchasing, in any area where the Superintendent identifies a potential for reducing environment impact.
